

Big Data in Public Health, University of Zurich, Switzerland, May 25 – 29 2020

By the end of the course, the participants are familiar with public health relevant definitions and challenges of big data approaches from major public health disciplines. They are able to address key issues in research and the broader public health discourse.

Specifically, participants will:

- Gain a broad understanding of the relevance and potential for big data to advance public health research
- Apply novel methods in big data analysis towards addressing important public health challenges
- Develop a project with potential for real-world public health impact using big data methods.
